APPENDIX K

TABLES, DATA, AND PERMITS
RELATED TO APEC JRG2-01 WOOD WASTE LANDFILL

Keystone Environmental
Knowledge-Driven Results

Summary of APECs JRG2-01 (Closed Wood Waste Landfill) and JRG3-01 (Former Wood Waste Landfill)

JRG2-01

This closed landfill is located on the western portion of the Site, adjacent to the eastern bank of the Jordan River and north of the former power plant spillway. The Permit (PR-06965) was abandoned on July 26, 2006 by Western Forest Products Inc. with five requirements imposed by the Director. Discharge into the landfill has not been carried out since 1999.

Requirement Number	Details
1	Carry out a hydrogeological survey to determine the extent of the leachate plume and the direction of groundwater flow within and from an area which includes the former landfill site (identified as approximately 2 hectares located within Parcels A, B and C, Lot 1, Section 9, Plan 13455, Renfrew Land District) and is bound by Jordan River to the west and the abandoned spillway to the south.
2	Carry out a monitoring program described in Item 3 to determine the characteristics of leachate discharges at two sites referred to as Site #1 (located at the abandoned spillway and previously monitored as a requirement of Permit PR-06965) and Site #2 (located at the bank of Jordan River as described in the report by Golder Associated Ltd. dated April 2001).
3	Sampling shall be done quarterly. The first two samples shall be taken by September 30, 2006.
4	Maintain the data of analyses and submit the data including an interpretative report with conclusions and recommendations annually to the Regional Manager, Environmental Protection.
5	Based on the findings and recommendations of the hydrogeological survey specified above, results of the monitoring program and/or other information obtained in connection with leachate from the former landfill site carry out additional requirements respecting restoration of the environment or the control and monitoring of waste discharged or waste that continues to be discharged, as specified by the Director.

Golder Associates Ltd. (Golder) produced a report dated December 12, 2007 titled Hydrogeological Assessment and Water Quality Monitoring of the Wood Waste Landfill Site, Jordan River, BC to fulfill the five requirements. Golder had previously completed an assessment in 2001 at this landfill. The Golder 2007 investigation consisted of the following:

- Drilling of six boreholes with five completed as monitoring wells. One monitoring well was located cross gradient to determine background or non landfill influenced groundwater parameter concentrations.
- Two soil samples were submitted for grain size analyses
- Sampling and laboratory testing of the groundwater at the monitoring wells
- Hydraulic testing (slug tests) and groundwater level monitoring
- Sampling and laboratory testing of surface water (including 96-hr LC_{50}) in the Abandoned Spillway (Site #1) and the Seep (Site #2)

Key results of the Golder investigation were:

- Horizontal groundwater hydraulic gradient ranged from 0.6 % to 1.1 % towards the southwest to northwest direction (205° to 305°).
- The estimated horizontal groundwater travel times are on the order of 1 m/day.
- Estimated flow rate from the groundwater seep ranged from 1.8 L/min to 17 L/min depending upon the date.
- The landfill leachate from buried wood waste has had some localized effects on groundwater quality. The chemical parameters associated with leachate were considered to be: pH; COD; Phenols; Tannin and Lignins; and dissolved iron.
- The surface water sample locations were subject to the tidal influence of the Jordan River leading to water results that indicated some mixing with seawater. Toxicity test results reported 100 % for four monitoring events and greater than 100 % for the last two events (December 2006 and March 2007).

As part of an application for Ministry of the Environment instrument, Keystone Environmental Ltd. (Keystone) has conducted additional sampling of the groundwater at the four Golder monitoring wells around the landfill.

- Three sampling events: July 2010; April 2011; and November 2011
- Groundwater sampling results indicated that:
    - nonchlorinated phenols and resin and fatty acids concentrations were less than the reported detection limits;
    - Dissolved metals concentrations were less than the CSR AW_{FW} and AW_{M} standards;
    - Tannins and Lignins concentrations were less than 10 mg/L;
    - MW06-2 reported dissolved sulphide concentration greater than the CSR AW standard of 0.02 ug/L at four out of the five sampling events (Golder plus Keystone events);
    - MW06-3 previously exceeded for dissolved chloride and sulphide but reported parameters less than the CSR AW standards for two consecutive sampling events in 2011;
    - MW06-4 groundwater is influence by seawater as consistently reports elevated dissolved chloride and dissolved sulphide concentrations.

JRG3-01

Keystone has investigated the wood waste landfill that was located near the former Shake mill located at the top of the hill. A total of 10 boreholes completed as monitoring wells were constructed in this APEC with soil and groundwater samples submitted for analyses. The soil PCOC concentrations were less than the CSR PL standard. The groundwater at one location is contaminated with nonchlorinated phenols across a delineated area of approximately 244 m^2. Other PCOCs in groundwater were less than the CSR PL standards. In addition, one surface water sample was collected from a groundwater seep at the toe of the bank, south of the AEC and adjacent to the beach. This sample was submitted for analyses of total

metals, anions, alkalinity, and tannins and lignins, along with non-chlorinated phenols. Results from the surface water sample indicated that concentrations of PCOCs were less than the BC WQ guidelines.

Pollution Prevention File No.: _____

APPLICATION FOR AMENDMENT OF A PERMIT UNDER THE PROVISIONS OF THE WASTE MANAGEMENT ACT

THIS APPLICATION is to be filed with the Regional Waste Manager at 2080-A Labieux Road, Nanaimo, British Columbia, V9T 6J9.

Any person who may be adversely affected by the granting of an amendment to a permit may, within 30 days after the last date of posting, publishing, service or display under Section 7 of the Public Notification Regulation, write to the manager stating how he or she is affected. The identity of any respondents and the contents of anything submitted in relation to this application will become part of the public record. Letters of concern are forwarded to the applicant.

PREAMBLE - The purpose of this application is To obtain authorization to dispose of wood waste from our Jordan River dryland log sort operation.

1. I/We Western Forest Products Limited
(Full legal name, or if a company, British Columbia registered name)

of Jordan River, B.C.
(Local address)

hereby apply for amendment(s) as described below to Permit No. PR-16140 _____ granted on August 16, 2001, last amended _____, which authorises the discharge/storage of 6,000 m³/a of wood waste
(air contaminants, effluent, refuse, special waste)

from a dryland log sort
(fish farm, mine, municipal sewerage system, pulp mill, refuse site, etc.)

located at Jordan River, B. C., to land, see site plan A
(air, stream, bay, inlet, other water body, or to land, etc.)

AMENDMENTS REQUESTED (describe "before" and "after" conditions; use additional pages, if required, to outline all amendments):

Dated this ___20th_ *day of* ___June_____, *2002*

Douglas Copp
(PRINT name of applicant or agent)

(Signature of applicant or agent)

Telephone No. 250 646 2031 ex222 Contact person _____

g:\forestry\dryland wood waste permit app - amendment.doc June 20, 2002

POSTING REQUIREMENTS

In accordance with Section 5 of the Public Notification Regulation, within 15 days after the date of application, a readable copy of the application must be posted in a conspicuous place at all main road entrances to the property (or other suitable location(s)) for a period of not less than 30 days.

If the application is for the treatment or disposal of Special Waste, for a Reviewable Project, or at the discretion of the manager, the applicant may be required to post the application on a billboard as specified in Schedule B of the Public Notification Regulation.

If the amendment application is a minor amendment as defined in Section 1(2) of the Public Notification Regulation, the amendment application does not have to be posted.

A copy of this application was posted at the site on the _20th____ *day of* _June____, 20_02_

(Signature of applicant or agent)

PUBLICATION AND NOTICE REQUIREMENTS

Publishing of this amendment application will be determined in accordance with Section 6 of the Public Notification Regulation. The applicant will be notified by ministry staff with publishing instructions. The applicant is responsible for all expenses incurred in publishing the application.

If the amendment application is a minor amendment as defined in Section 1(2) of the Public Notification Regulation, the amendment application does not have to be published.

If the applicant does not own the property associated with the discharge, emission or storage, the applicant must mail or deliver a copy of the application to the owner of the property, and provide proof to the manager, within 30 days after the date of the application that the property owner has been advised of the application.

AGENT AUTHORISATION

The applicant may elect to appoint an agent to deal directly with the Pollution Prevention Program. To appoint an agent, please complete the following.

*I/We hereby authorise*_____

(contact person, company name, address, telephone number)

_____

to deal directly with the Pollution Prevention Program on all aspects of the subject amendment application.

WATER, LAND AND AIR PROTECTION

WASTE MANAGEMENT APPLICATION

This application is to be filed with the Regional Waste Manager, Third Floor, 1011 Fourth Avenue, Prince George, B.C. V2L 3H9.

Any person who may be adversely affected by the granting or amendment of a permit may, within 30 days after the last date of posting, publishing, service or display under section 7 of the Public Notification Regulation, write to the Manager stating how he or she is affected. The identity of any respondents and the contents of anything submitted in relation to this application will become part of the public record and may be available to the public, in accordance with the *Freedom of Information and Protection of Privacy Act.* Letters of concern are forwarded to the applicant.

Preamble — The purpose of this application is to obtain an amendment, under the provisions of the *Waste Management Act,* to Operating Permit PA-7596, which would allow for flexibility in resin formulations to meet changing market demands.

Louisiana-Pacific Canada Ltd., Box 2338, Mile 3, Alaska Highway, Dawson Creek, B.C. V1G 4P2, hereby applies for an amendment, as described below, to Permit PA-7596, granted June 3, 1987, last amended August 3, 2000, which authorizes the discharge of contaminants from an orientated strand board plant located at Dawson Creek, B.C., to the air.

AMENDMENT REQUESTED

Before

Section 1.4 Two Press Vents — The characteristics of the air contaminants are typical of wafer board presses utilizing phenol/formaldehyde and diphenylmethane diisocyanate (MDI) resins in the process.

After

Section 1.4 Two Press Vents — The characteristics of the air contaminants are typical of wafer board presses utilizing phenol/formaldehyde and/or diphenylmethane diisocyanate (MDI) resins in the process.

Dated this 16th day of September 2002. File PA-7596. — Clint Shilts, *Agent.* [oc31 — 1807]

WASTE MANAGEMENT APPLICATION

This application is to be filed with the Regional Waste Manager, Third Floor, 1011 Fourth Avenue, Prince George, B.C. V2L 3H9.

Any person who may be adversely affected by the granting or amendment of a permit may, within 30 days after the last date of posting, publishing, service or display under section 7 of the Public Notification Regulation, write to the Manager stating how he or she is affected. The identity of any respondents and the contents of anything submitted in relation to this application will become part of the public record and may be available to the public, in accordance with the *Freedom of Information and Protection of Privacy Act.* Letters of concern are forwarded to the applicant.

Preamble — The purpose of this application is to obtain an amendment, under the provisions of the *Waste Management Act,* to update the air permit issued about 10 months prior to initial operation of the mill in a manner consistent with current operation. The PolarBoard mill operates under a variance to the air permit issued by the Minister of Water, Land and Air Protection on June 28, 2002. For about 21 months prior to the issuance of the variance, the mill had operated under temporary permit amendments. The proposed amendment is comparable with permit limits for other OSB mills in British Columbia. The proposed amendment is intended to allow sustainable, long-term mill operation consistent with protection of the environment, including public health.

Slocan Forest Products Ltd., to hold on behalf of Slocan Group, PolarBoard Division, of Mile 294, Alaska Highway, Fort Nelson, B.C. V0C 1R0, hereby applies for amendments, as described below, to Permit PA-13484, as granted on March 31, 1995, which authorizes the discharge of air contaminants for a zero liquid effluent mill from an oriented strandboard mill located near Mile 294, Alaska Highway, five kilometres south of Fort Nelson, B.C., to the air.

AMENDMENTS REQUESTED

Before

Address: RR 1, Fort Nelson, B.C. V0C 1R0. Section 1.1.2: Volumetric discharge rate for each dryer, 34 m^3/s/dryer. Section 1.1.3: Particulate, 14 kg/hr/dryer (total of 28 kg/hr); formaldehyde, 2.5 kg/hr/dryer (total of 5.0 kg/hr). Section 1.1.4: Particulate, 115 mg/m^3; formaldehyde, 50 mg/m^3.

After

Address: Mile 294, Alaska Highway, Fort Nelson, B.C. V0C 1R0. Section 1.1.2, Volumetric discharge rate for each dryer, Section 1.1.3 and Section 1.1.4: Particulate, 36.7 kg/hr for both dryers; formaldehyde, 12.2 kg/hr for both dryers. New cyclone I particulate, 1.5 kg/hr intermittent. New press vent stack, authorized discharge and works.

Dated this 26th day of September 2002. File PA-13484. — Lorence Forsberg, *Mill Manager.* [oc31 — 1813]

WASTE MANAGEMENT APPLICATION

This application is to be filed with the Regional Waste Manager, 2080A Labieux Road, Nanaimo, B.C. V9T 6J9.

Any person who may be adversely affected by the granting or amendment of a permit may, within 30 days after the last date of posting, publishing, service or display under section 7 of the Public Notification Regulation, write to the Manager stating how he or she is affected. The identity of any respondents and the contents of anything submitted in relation to this application will become part of the public record and may be available to the public, in accordance with the *Freedom of Information and Protection of Privacy Act.* Letters of concern are forwarded to the applicant.

Preamble — The purpose of this application is to obtain an amendment to a permit, under the provisions of the *Waste Management Act,* to expand the size of our wood waste disposal site for our Jordan River dryland log sort operation.

Western Forest Products Ltd., of Jordan River, B.C., hereby applies for amendments, as described below, to Permit PR-16140, granted on August 16, 2001, which authorizes the storage of 6000 m^3/a of wood waste from a dryland log sort located at Jordan River, B.C., to land (*see* Site Plan A).

AMENDMENT REQUESTED

Before

Section 1.1.6 The location of the point of discharge is a site of approximately 1.5 hectares in size, on Lot 9, Renfrew Land District.

After

We are amending the permit to include an additional approximate 2.0 hectares area adjacent the north boundary of the current permit area. The proposed amendment area is shown on the attached map.

Dated this 10th day of September 2002. File PR-16140. — Douglas Copp, *Agent.* [oc31]

WASTE MANAGEMENT APPLICATION

This application is to be filed with the Regional Waste Manager, Third Floor, 1011 Fourth Avenue, Prince George, B.C. V2L 3H9.

Any person who may be adversely affected by the granting or amendment of a permit may, within 30 days after the last date of posting, publishing, service or display under section 7 of the Public Notification Regulation, write to the Manager stating how he or she is affected. The identity of any respondents and the contents of anything submitted in relation to this application will become part of the public record and may be available to the public, in accordance with the *Freedom of Information and Protection of Privacy Act.* Letters of concern are forwarded to the applicant.

Preamble — The purpose of this application is to obtain amendments, under the provisions of the *Waste Management Act,* to Permit PR-11606, to allow the landfilling to landfill Cell No. 4 of up to 20 000 BDtonnes (approximately 40 000 cubic metres) of effluent pond sludge, MVR clarifier sludge, soil contaminated with smelt, hog boiler grate and precipitator ash and other non-putrescible wastes already on the mill site in excess of the anual allowance.

Vancouver BC V6C 3L2

Dear Permittee:

Enclosed is Permit PR-16140 issued under the provisions of the *Waste Management Act*. Your attention is respectfully directed to the terms and conditions outlined in the permit. An annual permit fee will be determined according to the Waste Management Permit Fees Regulation.

This permit does not authorise entry upon, crossing over, or use for any purpose of private or Crown lands or works, unless and except as authorised by the owner of such lands or works. The responsibility for obtaining such authority shall rest with the permittee. This permit is issued pursuant to the provisions of the *Waste Management Act* to ensure compliance with Section 54(3) of that statute, which makes it an offence to discharge waste without proper authorisation. It is also the responsibility of the permittee to ensure that all activities conducted under this authorisation are carried out with regard to the rights of third parties, and comply with other applicable legislation that may be in force.

This decision may be appealed to the Environmental Appeal Board. Notice of the appeal must (1) be in writing, (2) include the grounds for appeal, (3) be directed by registered mail or personally delivered to the Chair, Environmental Appeal Board, 4th Floor 836 Yates Street, Victoria, British Columbia V8V 1X4, (4) be delivered within 30 days from the date notice of the decision is given, and (5) be accompanied by a fee of $25, payable to the Minister of Finance. For further information, please contact the Environmental Appeal Board at 250 387-3464.

PERMIT
PR-16140

Under the Provisions of the Waste Management Act

Western Forest Products Ltd.

Suite 1000 925 W Georgia St

Vancouver, British Columbia

V6C 3L2

is authorised to discharge refuse to the land from a dryland log sorting operation located at Jordan River, British Columbia, subject to the conditions listed below. Contravention of any of these conditions is a violation of the *Waste Management Act* and may result in prosecution.

1. AUTHORISED DISCHARGES

1.1 This subsection applies to the discharge of refuse from a **DRYLAND LOG SORTING OPERATION**. The site reference number for this discharge is E243048.

1.1.1 The maximum authorised rate of discharge is 6000 m^3/a.

1.1.2 The components of the refuse which may be discharged are wood waste and mineral soil.

1.1.3 The authorised works are a landfill operation as directed, approximately located as shown on attached Site Plan A.

1.1.4 The authorised works must be complete and in operation when discharge commences.

1.1.5 The location of the facilities from which the discharge originates is on that part of Section 2, Renfrew Land District, shown outlined in red on Plan 133R except that part in Plan 23879.

1.1.6 The location of the point of discharge is a site of approximately 1.5 ha in size, on Lot 9, Renfrew Land District.

Date Issued: AUG 16 2001
Date Amended:
(most recent)

R. A. Bollans, P.Eng.
Assistant Regional Waste Manager

2. GENERAL REQUIREMENTS

2.1 Landfill Operation

(a) The permittee shall maintain the landfill authorised in Subsection 1.1 as a Level B operation in accordance with the Pollution Control Objectives for the Forest Products Industry of British Columbia (dated November 23, 1977), which, under normal conditions, requires that cover material to be applied once per 20 days of operation and at least once per month. In this case, an intermediate cover shall be applied immediately after each disposal of wood waste, which is to occur two times per year.

(b) The wood waste is to be deposited in excavated trenches no deeper than 7.0 m below the current grade. The trenches are to be oriented in an east-west direction, starting at the north end, and are to be separated by at least 1.5 m. The wood waste shall be placed in each trench in two lifts, each lift being compacted and no deeper than 3.5 m after compaction. Each lift is to be covered with an intermediate cover of at least 25 cm of soil.

(c) No wood waste shall be placed in standing water or within 1.5 m of the highest groundwater table.

(d) No refuse shall be placed within 50 m of the bank which slopes down to the beach on the south side of the site.

(e) A berm, acceptable to the Regional Waste Manager, shall be constructed along the southern boundary of the landfill site to ensure that the 50-m buffer as specified in Subsection 2.1 (d) is maintained.

(f) The existing drainage entering the site from the north shall be diverted around the active fill area in such a manner as not to impede the flow nor alter the downstream water quality. All water diversion ditches installed shall be suitably protected to minimize erosion. No material shall be placed within 20 m of any diversion ditch.

(g) A final layer of at least 1 m of suitable cover material shall be placed over the completed landfill. The maximum finished elevation shall be no higher than 1 m above the current grade.

2.2 Site Preparation and Restoration

Provision of fencing, site access, surface water diversionary works, firebreaks and site restoration, as required, shall be carried out to the satisfaction of the Regional Waste Manager.

R. A. Bollans, P.Eng.
Assistant Regional Waste Manager

2.3 Waste Reduction and Alternative Disposal

The Ministry of Water, Land and Air Protection has developed a policy to reduce, recycle and reuse solid wastes. The permittee is encouraged to segregate for recycling and reuse, where possible, materials destined for disposal at this site.

2.4 Special Waste

The discharge of any material determined to be a special waste as defined by the *Waste Management Act* Special Waste Regulation is prohibited.

Dear Permittee:

Re: Abandonment of Permit PR-06965 Issued under the Authority of the *Environmental Management Act*

Your letter of May 21, 2002 advising of your intention to abandon Permit PR-06965, pursuant to Section 20(3) of the *Environmental Management Act*, has been received. It is recognized that you have exercised the right under the subject authorization to discharge waste.

In accordance with Section 20 (5)(b) of the *Environmental Management Act*, the Director hereby imposes the following requirements:

1. Carry out a hydrogeological survey to determine the extent of the leachate plume and the direction of groundwater flow within and from an area which includes the former landfill site (identified as approximately 2 hectares located within Parcels A, B and C, Lot 1, Section 9, Plan 13455, Renfrew Land District) and is bound by Jordan River to the west and the abandoned spillway to the south. Terms of reference for the survey shall be submitted for approval to the Director by October 31, 2006. The survey shall be completed and final report submitted by March 31, 2007 or an alternate date as specified by the Director. The terms of reference for the survey and final report shall be prepared by a qualified professional. A "qualified professional" means a person who:

   (a) is registered in British Columbia with his or her appropriate professional association, acts under that professional association's code of ethics, and is subject to disciplinary action by that professional association, and

www.gov.bc.ca/env

VI. 26/07/06

(b) through suitable education, experience, accreditation and knowledge may be reasonably relied on to provide advice within his or her area of expertise as it relates to this landfill;

2. Carry out a monitoring program described in Item 3. to determine the characteristics of leachate discharges at two sites referred to as Site #1 (located at the abandoned spillway and previously monitored as a requirement of Permit PR-06965) and Site #2 (located at the bank of Jordan River as described in the report by Golder Associated Ltd. dated April 2001). The monitoring program shall be carried out by a qualified professional, as defined in Item 1.

3. Sampling shall be done quarterly. The first two samples shall be taken by September 30, 2006. The samples shall be analysed for the following parameters:

-toxicity (96hr LC_{50})
-chemical oxygen demand (COD)
-tannins and lignins
-pH
-phenolics
-chloride
-chloride
-specific conductance
-metals (total, regular ICP package)
-sulphide
-sulphate

Sampling shall be carried out in accordance with the procedures described in the "British Columbia Field Sampling Manual for Continuous Monitoring Plus the Collection of Air, Air-Emission, Water, Wastewater, Soil, Sediment, and Biological Samples 2003 Edition (Permittee)", or by suitable alternative procedures as authorized by the Director.

Analyses are to be carried out in accordance with procedures described in the "British Columbia Environmental Laboratory Manual for the Analysis of Water, Wastewater, Sediment and Biological Materials and Discrete Ambient Air Samples 2003 Edition", or by suitable alternative procedures as authorized by the Director.

Copies of the above manuals may be purchased from the Queen's Printer Publications Centre, PO Box 9452, Stn. Prov. Gov't. Victoria, British Columbia, V8W 9V7, 1-800-663-6105 or 250 387-6409, and are also available for inspection at all Environmental Protection offices.

4. Maintain the data of analyses and submit the data including an interpretative report with conclusions and recommendations annually to the Regional Manager, Environmental Protection. The information shall be submitted within 30 days following the calendar year in which the data was collected.

5. Based on the findings and recommendations of the hydrogeological survey specified above, results of the monitoring program and/or other information obtained in connection with leachate from the former landfill site carry out additional requirements respecting restoration of the environment or the control and monitoring of waste discharged or waste that continues to be discharged, as specified by the Director.

.../3

V.S. 26/07/06

This decision may be appealed to the Environmental Appeal Board in accordance with Part 8 of the *Environmental Management Act*. An appeal must be delivered within 30 days from the date that notice of this decision is given. For further information, please contact the Environmental Appeal Board at 250 387-3464.

Due to the decommissioning of a site which was used for a regulated industrial or commercial activity listed in Schedule 2 of the Contaminated Sites Regulation (industrial wood waste disposal), it is necessary that the site be entered into the provincial site registry. Accordingly, as provided by Section 40(8) of the *Environmental Management Act*, you are requested to submit a site profile for the subject site (forms are enclosed). Please note that these forms are to be filled out to the best of your knowledge and require only readily available information about the past and present uses of a site, as well as basic land descriptions. The assistance of a consultant to complete the forms should therefore not be necessary.

If you have any questions or concerns, please contact the Vancouver Island Region office at 250 751-3100.

Yours truly,

A. Knezevic-Stevanovic, M.A.Sc.
