Sunro to Start Hiring For Quick Production

Sunro mine near Jordan River will begin hiring about 120 men immediately and will be in production in about three months, one of the developers said today.

Pollution control standards set out in the permit the province has just issued are "rather stringent but not prohibitive," F. C. Dobell, vice-president of Crownex International, said from Vancouver today.

The mine will meet them and work is going ahead immediately he added. Crownex is one of the firms backing Dison Development Ltd. which is reactivating the old copper mine.

NO PROBLEM

Dobell said there will be no problem rapidly completing the necessary preliminaries the Pollution Control Branch is insisting upon before production starts.

One of these is extending about 1,500 feet into Juan de Fuca Strait the pipe which will discharge up to a million gallons of mine tailings a day. That's the distance the company will have to carry it to meet the permit's requirement that tailings be discharged at a minimum depth of 40 feet.

Initially Dison had proposed having the end of the discharge pipe just below the surface at the lowest tide level.

Among numerous other controls set by pollution control director William Venables:

- The company must pay for before-and-after studies of sea life in the vicinity of the discharge. (Venables has the power to tighten controls at any time should monitoring show the need).
- Traces of heavy metals in the tailings must not total more than one part per million and cyanide traces must not be higher than one part in 10 million. Cyanide is sometimes used in the extraction process.
- Before starting production Dison must build an emergency spill basin (in case the tailings discharge system breaks down) and it must have an automatic alarm system.

DIFFERENT LOCATION

The tailings pipe is also to be located about 2,000 feet west of where the company intended to have it meet the water. While this means it will be only 3,000 feet east of the Jordan River Mouth, it also means the pipe will enter the water from a promontory and reach further into the strait.

Jordan River residents, commercial fishermen, conservationists and two government departments had earlier opposed granting the permit, arguing mine tailings in years past have fouled beaches and could adversely affect salmon migration and recreation quality.

Venables initially rejected Dison's application but the company appealed to the Pollution Control Board.

BULLETIN

Heat Wave Ending, Weatherman Says

The heat wave that has broken temperature records for several days in British Columbia is expected to subside Thursday in the Victoria area.

Weatherman Allan McQuarrie said today a low pressure area building in the lower B.C. Interior because of the extreme heat there will be drawing air in through Juan de Fuca Strait, bringing temperatures in the mid 70s and high 60s Thursday.

This may be the end of what is probably the hottest early August on record, McQuarrie said.

Despite the relatively cooler temperatures, the sky is expected to remain clear and sunny, he said.

The change in weather may also bring some fog patches into the Victoria area.

Ex-Victorian Named To Cabinet Post

Alastair Gillespie, a Victoria-born Member of Parliament, has been named Canada's first minister of science and technology.

The appointment was announced today as part of a slight cabinet shuffle by Prime Minister Trudeau.

Robert Stanbury, a minister without portfolio, has become the new communications minister and a Toronto MP, Martin O'Connell, will replace Stanbury.

ELECTED 1968

Gillespie, 49, has represented Toronto-Etobicoke in the Commons since his election in 1968.

His parents are the F. P. Gillespies of 1326 Manor Road, and his brothers and sisters also live in Victoria.

Gillespie attended Brentwood College and was a Rhodes Scholar in 1946. He came to the Commons with a wide background in business and international affairs. He has been an active member of several Commons committees.

Stanbury, 41, and a minister without portfolio since 1969, will replace Eric Kierans who resigned from the cabinet in April over the government's economic policies.
