

WATER BOARD RULES IN FAVOR OF POWER CO.

VICTORIA, September 5.—Further complications were piled on the important power rate dispute between the West Kootenay Power & Light company, the Granby Consolidated Mining & Smelting company and the city of Grand Forks today, when the provincial water board, in the most important ruling it has handed down for years, found that it had no jurisdiction over West Kootenay power rates outside a limited area around Rossland. In other words, the board refuses to arbitrate rates charged to Grand Forks, to the Granby company at Allenby in the Okanagan valley or any territory outside a certain specified area in the West Kootenay district, within a radius of fifty miles of Rossland.

The ruling is in favor of the West Kootenay company, but the board, of course, does not rule on the legal right of the company to sell power to the Granby company. The power company contends that it has no power to sell electricity outside the Rossland area, but this question, involving the future power supply of the huge Granby operations, is in the courts now and not before the water board. The latter's ruling only removes the board entirely from the functions of settling rates outside the Rossland area.

No Jurisdiction Beyond Rossland Area

The Granby company had applied to the board for a reduction in its rates. The West Kootenay company retorted by arguing that the board had no jurisdiction, as it was limited to the district mentioned in the company's charter, defined in official maps, and called that part of West Kootenay within fifty miles of Rossland. Most of the big consumers of the power company, except the Consolidated Mining & Smelting company, thus are outside of the scope of the board, under this new ruling.

Grand Forks, which had succeeded before in securing an arbitration, now finds itself outside the board's jurisdiction, although its case for lower rates was heard, no judgment having been handed down.

It was understood here, when the case was argued recently, that Grand Forks would appeal the water board's ruling should it favor the West Kootenay company. Appeal, it is understood, will be taken to the minister of lands under the water act, by the interior city, but whether the Granby company will join in this action is not known. Unless the judgment is reversed, of course, Grand Forks, the Granby company and most of the West Kootenay company's other consumers have no means of securing arbitration of power rates.

GOVERNMENT TO GIVE RELIEF TO SUMAS FARMERS

VICTORIA, September 4.—Premier Talmie returned here on Saturday after a trip to Sumas, convinced that the government's reclaimed area is extremely fertile but that farmers on it cannot operate profitably when they have to pay the government reclamation charges of \$14 an acre.

"What must be done to make a success of the reclamation area is to put the land on a proper valuation, under which farmers can operate successfully," the premier declared.

"The stocks of grain, the rich clover growth and the tobacco crop which we saw at Sumas told a story easily read by anyone who understands agriculture. These things showed that the Sumas land is highly productive.

Cannot Be farmed Profitably

"Productive as it is, however, it cannot be farmed profitably if the charges against it are too high. Charges of \$14 an acre as charged are too high to make profitable farming possible. That is obvious to anyone who knows farming.

"The only way a farm can pay so high a charge is when it is growing vegetables in the truck business. In that business it is possible to pay charges of \$50 an acre and still make money, provided the market is immediately adjacent to the farm. But at Sumas this does not obtain. It is not immediately adjacent to Vancouver and truck farming there on a large scale could not compete with the truck farms near Vancouver at this time."

The premier announced that the cabinet would give full consideration to the whole future of the Sumas area.

"What we want to do is to put the scheme in a satisfactory basis, so far

Surprises in Peking

SUN'S WEEKLY TRAVELOGUE

ALTHOUGH Peking has been renamed Peking, and Nanking is to supersede it as capital of China, the old town, with its structures and traditions that have played their part in history, cannot but continue as an important center of Chinese life.

There is much that the tourists to Peking find that is unexpected, and every visitor to the old capital has pretty definite ideas as to what he is to find. For one thing, he expects to find the town corrupted and contented; nor is he disappointed in the palaces, the government offices and the multitude of barracks which surround the city, some self-seeking gangs of grafters who have plundered the Chinese people since the overthrow of the monarchy are still to be found. But the age-long Chinese tradition which would have centers of government also centers of learning has, in spite of reactionary rulers, filled the capital with thousands of eager students for whom Peking is not only a city of splendid memories, but a city of hopes.

There is the Peking university, a first-class American mission institution; the University of Peking an equally high-grade government school; the new Chin Hwa college and a score of lesser schools.

It was among the students and teachers of Peking, particularly among those of the universities, that the liberal movement of recent years in China started, and continued in the face of wholesale arrests and suppression by corrupt officials. By the Peking students the movement was spread throughout the land.

To find Peking the source and center of this forward-looking movement for reform is not the least of the surprises which await the visitor.

Buddha and Confucius

In the great Lama temple in the northwest corner of the city, with its seven sunlit courtyards and its hundred deities, one may see on any forenoon three-score yellow-robed novices droning the morning lesson, cross-legged, before the many-handed God of Mercy, or half a dozen monks in purple palliums celebrating a Lamaist mass with rice out of a silver bowl and wine from a gold-mounted chalice fashioned from a human skull.

Just across the street from these idolatrous lamas, who represent the bedazzled Buddhism of Tibet and who minister chiefly to the Mongols of the North, is the quiet, shady close of the temple of Confucius, wherein are neither monks nor idols. Here the master is represented by a simple wooden tablet bearing the letters of his name. It is but little more exalted than the tablets of the four notable philosophers and the twelve particular disciples who share the hall with him, and the two and seventy famous scholars whose names are recorded in the long, low building on the sides of the court.

The initial reaction of the visitor to much that he sees in Peking is apt to be one of disappointment, followed by surprise, then by delight and admiration.

Exploring the Western Hills

When he leaves the city gates and goes to the western hills, there is surprise and delight, but no initial disappointment. Perhaps that is because he has heard so much of the city and so little of the hills that he goes expecting nothing; perhaps it is because the hills, in spite of their barrenness, are altogether lovely.

However that may be, half the charm of Peking is not in Peking at all, but in its surroundings. Shrine upon shrine, palace upon palace, lie without the city walls. They dot the surrounding plain; they nest on near-by wooded knolls; they lodge in crevices of the wide-circling, treeless hills—those quiet hills, slow curving, like billows after storm; verdant and velvety in summer; in winter bare and red-brown, deepening into twilight purple. To understand Peking, and to love it, one must feel its glory in the setting of its hills, not see it through the critical dust of the streeted plain.

One of the most pleasant ways in which to explore the hills is by rickshaws. Blankets and quilts must be taken, for every provident traveler in

China carries his bed with him. Away one goes three and a half miles, at a dog trot, to the western gate, thence seven more over the wollow-shaded highway to the Mountain of Ten Thousand Ancients, a pleasant wooded hillock.

Before it lies a broad lake and on its slope stands the far-famed Summer Palace. Though several centuries more recent than Kublai Khan, this is indeed the stately pleasure dome of the poet's imaginings. Kublai might well have decreed it, with its graceful, spire, triple-roofed pavilion set upon a massive four-square base of stone, towering above porticos and pailons, kiosks and summer houses, grottoes and labyrinthine passages, islands and lily ponds, bridges of marble, and grotesque dragons cast in bronze.

Another jog of seven miles takes one past the Jade Fountain pagoda, past leisurely camel trains, beyond the high road and the dust of tourist autos, under the shadow of somber, square, beacon towers, marching in single file, at half-mile intervals, out over the hill crests.

Pushing on deeper into the hills one comes at Pi Yun Ssu, to the temple of the Green Jade Clouds, the loveliest temple in the north.

Trip to the Great Wall

One of the most fascinating trips to be made from Peking is to the Great Wall. It is wonder enough for one journey to walk atop the wall and look out over the dusty brown plains of the north where Tartar horsemen once swarmed toward the passes, and to see trains of pack-mules straggling through the great stone gateways oblivious of the traffic on the nearby rails, their backs laden with merchandise as were the backs of pack-mules two thousand years ago.

Like so much in or near Peking, the Great Wall is at first disappointing. It is disappointingly small. It is, in places, only twenty feet high and as many broad, while the city wall of Peking is twice as high and, at the base, thrice as broad.

When one stands close under the Peking city wall it looms above with the massive grandeur of an abrupt high cliff; but when the traveler gets off the train at the Nankow pass and sees the bit of wall scrambling up the hillside before him, he wonders why it is called "great."

That, however, is only at first. He has only to climb out of the pass and follow the wall for half an hour and he begins to understand.

Away it goes before him, and behind, up, up the tipmost ridges of the hills—bending, swinging, climbing, leaping like the supple, agile dragons of the palace-garden screen. It undulates, it sways, it marches before, it takes the curve of the hills like a swift auto on a mountain road, on and on and on, across the farthest gully, beyond the farthest peak. Where the mountains blend into the clouds, there it is; where the last horizon vanishes, it is there.

NEW MINISTER OF MINES TO CONTINUE WAR ON CROOKED MINE DEALS

VICTORIA, September 4.—War was declared on the fraudulent mining promoter Saturday by Hon. W. A. McKenzie, minister of mines.

In a letter to every mining engineer of his department, Mr. McKenzie issued the emphatic instruction that every possible step must be taken to save British Columbia investors from fake mining schemes. His entire support and that of the government will be thrown behind engineers of the department in curbing wildcat operations which fatten on the present wave of investment in British Columbia mines, Mr. McKenzie declared.

"The mining laws of this province, as designed to prevent fraudulent mining operations, will be enforced to the limit," Mr. McKenzie declared. "At no time have such measures been so necessary as they are now, on account of the present activity in the mining industry.

"Interest in British Columbia is greater now than at any time in our history," Mr. McKenzie said in his letter to his officials. "I am of the opinion that if this great activity is to continue, if the industry is to be

kept on a sound and healthy basis, if a free flow of capital from outside as well as from resident investors is to be maintained it is necessary that nothing be left undone in the endeavor to restrict the activities of all but those who are engaged in legitimate mining development."

HORTICULTURAL BRANCH ISSUES FINAL REPORT

In the last issue of the Horticultural News Letter for the 1928 season, the horticultural branch, department of agriculture, at Vernon, B.C., sums up the fruit and vegetable crop situation for the current year as follows:

Vancouver and Gulf Islands

The weather has been fine during the past week, but there were good showers of rain all up and down the island on August 12.

Loganberries are over and blackberries are past the peak.

Various varieties of apples are maturing rapidly. Yellow Transparent and Duchess are over, and Wealthies, Gravensteins and other fall varieties are on the market. Early winter varieties are making satisfactory progress.

The Bartlett pear crop will soon be ready and there appears to be an excellent crop at various island points. Dr. Jules Guyot, Louise Bonne, Boussock and other fall varieties are ripening in good condition.

The annual exhibition is in full swing at Willows fair grounds this week, and there is the finest display of fruits and vegetables that has been staged for many years. Competition is keen in practically all classes.

Salmon Arm, Sorrento, Main Line Points

A few light showers have fallen during the last two weeks, but a good rain would be beneficial to all crops. Tree fruits are not suffering to date and are sizing well. The temperature has remained fairly cool.

The Wealthy crop is exceptionally clean, the fruit is well up to the average in size and is coloring well. A few Wealthies are coming into the packing houses, but general movement of the variety will not begin till next week. It is expected that the general movement of McIntosh will begin about September 8. This variety is making good development, is fairly clean, and of good color for the season. Other varieties are well up to average in size, color, etc., for the time of year.

There is practically no "brown core" in the district this year. Duchess apples are cleaned up. Transcendent crab apples, Bradshaw and Burbank plums, and Clapps Favorite and Bartlett pears are moving out.

Penticton, Keremeos, Oliver and Osoyoos

Favorable weather conditions have prevailed for the past two weeks. Bartlett pears are over the peak, and will be about cleaned up by the middle of next week. Flemish Beauty pears are coming in in quantity, and it is expected that some Elberta peaches will start next week. Crawford peaches are just starting, while Yellow St. Johns are about cleaned up.

Gravensteins, Kings, and Wealthy apples are moving freely. At Oliver, cantaloupes are at the peak, and quite heavy shipments are being made.

Okanagan General

The month of August has been very dry and warm and all fruit are sizing and ripening fast. The ripening season for fruits, which was a little later than last year for the earlier varieties, is now somewhat in advance of last year. There have been many cold nights during the past few weeks, these with heavy dews, and with high temperatures during the day have brought out outstanding color on all fruits for this season. There has been abundance of moisture in all parts of the district, so that size is good. Insect pests, which have been less troublesome than in past years, have been kept well in hand. Fungus diseases due to the excessive

MUST SUPPLY POWER TO THE GRANBY CO.

VICTORIA, September 4.—An injunction restraining the West Kootenay Power & Light company Limited from any interference with the supply of electrical energy supplied to the Granby Consolidated Mining, Smelting & Power company from the present date to September 10, when the mandamus proceedings to be brought by the latter company will be argued, was granted E. C. Mayers, K.C., acting for the Granby interests, in an application before Mr. Justice Murphy in supreme court chambers this morning. Mr. Mayers explained that the question of the supply of electrical energy to the mining corporation was the subject of other proceedings to be argued. Meanwhile he intimated any interference with the supply might occasion considerable loss to the company as well as affecting the large number of employees of the company adversely.

Mr. Justice Morrison granted the injunction asked, with leave open to the defendant company to reply.

SLAM AT PATENT LIGHTER

H. G. Wells is responsible for the following story: At a certain fancy dress ball all the costumes were intended to represent names of famous books. The majority of book titles were promptly recognized, but everyone was puzzled by the costume of one charming young lady. It was designed to look like a patent cigarette lighter. All sorts of titles were suggested, but to each one the girl shook her head. Finally, some one ventured to ask her outright the title of the book represented by her dress. "Why!" she laughed. "Don't you see? It's 'The Light That Failed.'"

There is a time when you can justifiably be "sorry for yourself"—when you have lost a true friend.

We should commit no sin, and how much sin should we permit?

rainfall in the early part of the season, made their appearance in some orchards; these, however, have been well controlled in general. Apple scab will tend to lessen the grade in some instances, but much of the infected fruits will not be harvested. Physiological troubles such as drought spot, corky core, fruit pit, and breakdown are outstandingly absent this year, so that, with these features considered, the output of fruit from the district this year should be one of high quality.

The earlier crop estimates for the district will all stand.

The dry weather has been very favorable to the vegetable crops. Cantaloupes in the Oliver district, which are now at the peak, have been of high quality and good yields have been obtained. The market demands, however, have not been proportionate to the production. Tomatoes are ripening fast and are also of good quality and yield. Onions have sized and matured well and many fields are now pulled for drying. The quality should be good if good drying weather continues. Potatoes are an excellent crop, although the acreage still remaining of late varieties is somewhat limited this year. All earlies have been dry. Celery in the Armstrong district is also a quality crop this year.

Kootenay and Arrow Lakes

The weather continues quite warm, clear and bright, but is good weather for all tree fruit crops, as most of the orchards can be irrigated and are not suffering from lack of moisture.

The cherry crop is over and a very large tonnage has moved out from the Kootenay. All apples are sizing better than usual and are putting on good color. A few early apples are moving to the nearby markets. Wealthy, Gravenstein and Kootenay Gem should start to move around the first week in September from a number of the sections in the Kootenay. A large supply of nearly all kinds of vegetables is being offered to all local markets. Sweet corn, tomatoes, cucumbers and potatoes are the main tonnage at the present time.

Note.—Kootenay and Arrow Lake apple crop estimated at this time, 130,000 boxes. This is the final estimate for this season, and the tonnage shipped should be near this amount. The fruit crop estimates for the Creston district will be maintained, as will also those for the Grand Forks district.

NOTES, NOTIONS & NOTABLES

JOSEPH H. SINCLAIR, representing the American Geographic society, has returned to the United States from a hard trip of exploration through Ecuador, where he had a terrific experience in an endeavor to reach a smoking volcano which had erupted, the whole country for miles around being deluged with a flow of lava. The natives had a wholesome superstitious fear of the great pile and could not be induced to guide the explorer as near as he wanted to go, but by his own efforts and alone he managed to get within seven miles of the cone, and this was near enough for him to witness a number of explosions which repeatedly changed the contour of the crater's rim. Little or nothing had been known about the volcano and he secured valuable data concerning its character and location. Mr. Sinclair pointed out that he was not the first white man to see the volcano—a which the natives call Reventador, meaning "Eruptor." Near the place the explorers came on a lone white man who could not tell them how long he had been there nor why he had penetrated so far from civilized association. Nor would he go with them to the mountain. He, too, had been infected by the superstition of the natives, which holds that whenever a human sets foot on the side of the tall volcano, Reventador becomes "muy brava," or very brave.

ONE of the most fascinating chapters in animal poisons is the subject of natural immunity, the fact that some animals are immune to the poisons of others and remain unharmed if stung or bitten by the poisonous animals, whereas all other sorts of beasts succumb. A case in point is that of desert animals, which are unharmed by a scorpion's sting. The desert fox, the kangaroo rat and other inhabitants of deserts where scorpions abound are in this happy position. Their cousins, living far away from the desert, would at once be seriously injured by a scorpion's sting, whereas the desert breeds remain unharmed. It is to be supposed that in the far distant past, before the desert animals had this complete immunity to scorpion venom, those which were stung and could not resist, died, leaving no offspring. Their luckier brothers who happened to have a harder constitution, survived and left behind them a resistant race of descendants.

PEOPLE are always looking for all the hardships and difficulties that they may travel a hard road for their speech is in line with their thinking. We know farmers that start in with their spring work and see their crops ruined by coming disaster, until it has been stored away. A snow and cold spell coming after the oats are in is certain to kill the seed, and all must be done over. A two days' rain is evidence that it is going to be so wet that nothing will mature. If the surface of the ground is dry we are in the start of a dry spell that will ruin everything. We claim that a man that really thinks that way lives a mighty poor life. We have to take about everything on faith in this old world and on the whole our faith is justified. A happy philosophy of life is a thing that can be cultivated and is worth while. It is an added treasure to the joy of living, not for one but for many.

CEREMONIES associated with the various methods of disposing of the dead the world over are as interesting as they are varied. Modern nations as well as many primitive and Oriental peoples practice inhumation, and with it their many and peculiar rites. But, as in bygone days, funeral ceremonies of today are most sacred and impressive occasions. Cremation or the burning of dead bodies to ashes, is now practiced to a small extent in several countries, but is by no means new. At the beginning of the Christian era cremation was the prevailing custom of the civilized world, with the exception of Egypt, where the dead were embalmed; Judea, where they were entombed in a sepulcher; and China, where they were buried in the earth. Christian inhumation, which is now universal, probably owes its origin to the doctrine of resurrection of the body. While cremation was practiced by the latter Greeks, Romans, Danes and others, the first cremation societies were not formed until the nineteenth century. This method of disposing of human bodies is now urged by some health authorities on sanitary grounds.

It was just three centuries since Charles Perrault, creator of Cinderella and Red Riding Hood, was born. Perrault, a Frenchman, never dreamed that the fairy children of his brain would become immortal. He wrote poetry of an exceedingly dull order, and it was by his poems and not by his fairy stories that he hoped to win fame. Perrault conceived and wrote his stories, which he called "Tales of Mother Goose," to please his little son, just as Lewis Carroll, a mathematician, told the tale of Alice in Wonderland to amuse two little girls. Cinderella and her glass slipper was one of Perrault's heroines. Some people have tried to insist that Cinderella's slipper of "verre," or glass, was meant to be a slipper of "vair," or fur, but one cannot imagine Cinderella in anything but a crystal slipper.

ENGLISH in eleven lessons so equipped twenty Paris policemen that they answered 350 questions in the new language. This encouraging result caused the prefect, Jean Chiappe, 250 more of the force to go to the school. Frenchmen who have adventured abroad suggest that a notebook and pencil will help out the officers, for they have found it simpler in England and America to write their questions rather than wrestle with the foreign accent.

THE blowing of the wind is owing to the presence of more air at one place than at others. It causes a rush from the places of more air toward those of less, and the greater this difference in quantity of air the greater the push, and the faster the winds. Now, it is difference in temperature that causes the difference in the accumulation of air; in March the difference in temperature between the southern and northern portions of the continent is greater than at any other time of the

year, hence the difference in atmospheric pressure between these regions is then greatest and the resulting winds strongest. These winds not mainly north and south, as the pressure is, but from west to east. This is owing to the effect of the rotation of the earth, in a way fully understood, but not capable of brief explanation.

THE earliest rain measure, or gauge, was first used in 1600 in the fifteenth century. Galileo, Sir Christopher Wren and others experimented with measures, but the first gauge of which there is any authentic description was made in England by a Mr. Hooke in 1605. The rain was collected by means of a funnel into a flask, weighed, and the weight converted into inches—a different method. It was not until 1891 that the late G. J. J. Symonds designed a satisfactory pattern of gauge. In his "storm" gauge an inch of rain is represented by 24 fills in the tube. Floats make reading easy. If one tube fills it overflows and registers accurately in the second.

HERE is a little problem to try when you are lonesome. It is more than odd and interesting. Set down these figures—1 2 3 4 5 6 7 9, leaving out 8. Choose one of these figures and multiply it by 9. Then multiply 12345679 by the result. To your surprise the final result will be made of nothing but the first figure chosen. For example, suppose you choose figure 5. Multiplying 5 by 9 gives 45. Multiplying 12345679 by 45 gives 555555555. And no matter which figure is chosen to begin with, the final result will always contain 9 duplicates.

NATIVES of Dahomey are catching fish by "doping" the swimmers with a certain seed. They scatter the seed over the river, the fish eat it, become stupefied and rise to the surface helpless. Then the natives spear their prey. Fish weighing as much as 20 pounds are obtained.

A "BLUE" wildcat, said to be the only one ever seen by a white man, and a gorilla, one of two in captivity in America, were among the collection of wild animals Jules L. Buck, hunter and animal trainer, brought from his last hunting expedition in Africa to his home in East Camden, N. J. A specimen of the rare gherzi and one of the gerbrazza tribes of monkeys, captured in central Africa, also have been placed in cages at the Buck menage. The famous hunter regards a pigmy mouse, scarcely larger than a bee, as one of his rarest prizes.

THE old-fashioned backyard, littered with tossed-out materials of all sorts and kinds, is fast disappearing. Landscaping is recognized as an important feature of the new as well as the old home, and garden furniture is more and more seen on the moderate sized plot of ground as well as on the vast and costly estate.

THE geological survey says that in surveys of small tracts of land no account is taken of the fact that the surface of the earth is spherical. The irregularities of the surface more than make up for the curvature. True north and true south lines are not parallel, but get closer and closer together as one goes north or south from the equator. For large areas the curvature of the earth is apparent. In the general land office surveys the curvature shows. The blocks of a square mile are made as nearly square as possible, the error from curvature being all thrown into the northwest corner of each six-mile block.

DR. GEORGE DUNCAN says: "Salem aleikum" means 'peace be unto you.' This word 'peace' has a very comprehensive meaning and signifies all kinds of blessings, material, mental and spiritual. It is a very common greeting among Arabic speaking people. Another expression, 'May your day be white,' 'Jom abjad aleikum'—literally is 'May a white day be to you.' The term 'white day'—sunny day—a day full of good cheer with all matters prospering."

A GREAT American osprey, habitant of the sea and sometimes called the "ocean fish hawk," was brought down near Lancaster, Ohio, recently. The big bird, the only one ever seen in Ohio and one of the very few in the United States, was shot by William Loving, who saw it in the act of carrying off a lamb. The bird measured six feet between wing and tips.

John L. Baird, whose invention of television enables us to see across the Atlantic, is the son of a Scotch Presbyterian minister and made a failure in business before he devoted himself to science.

POEMS FROM THE FAREAST

JAPAN

PARTING

Mine oft-reiterated prayers invalid
 The parting guest would stay: Oh, cherry-flow'rs!
 Pour down your petals, that from out these bow'rs
 He ne'er may find the homeward path again!

—Anon.

ANCIENT HISTORY

TWENTY YEARS AGO IN GRAND FORKS

One of the old-timers of Grand Forks returned to the city last week from Nevada with a "roll" consisting of 40 cents in silver and a post-graduate certificate as a poker player. With this capital and experience the local sports proved to be easy victims.

Work was started yesterday on the foundation of the new Province hotel three-storey brick building.

Peter Veregin, head of the Doukhobor colony being established at Waterloo, was in the city last Saturday for the purpose of negotiating a large consignment of nursery stock, which the colony proposes to plant on their new possessions. He was accompanied by his interpreter, John Sherblin.

Seven out of the eight furnaces are now in operation at the Granby smelter.

Hon. William Templeman, minister of mines in the federal cabinet, and W. R. Brock, director of the geological survey branch, department of mines, were shown through the Granby smelt and mines by Manager Hodges last Friday.

SUNSHINE

Like George

Dr. William Lyon Phelps, Yale's eminent critic, was condemning in his hale and virile way a long-winded novelist.

"If his hero, 'partakes of food,' said Doctor Phelps, 'a paragraph must explain that he does so because he's hungry; and if his heroine drinks a glass of water another paragraph explains that the cause of her action was thirst. This novelist is like George.'

"I had a letter from George today," said a lady. 'He says his mother has accidentally broken her leg.'

"How like George that is," said another lady. 'Many a young man would have omitted the word "accidentally," and you'd have been left to infer that his mother had broken her leg on purpose.'

A Monopoly

"Every passing motorist is a potential customer of that farmer."

"How's that?"

"He has a filling station on the corner; sells hot dogs, soft drinks, ice cream, etc., in an adjoining shack. He also has a stand for fruit, vegetables, eggs and milk, and his house has been turned into an inn."

"But suppose one does not want gas, a light lunch, farm products, a dinner or a night's lodging—what is there?"

"A public golf course in the pasture."

His Business Builder

Two men waiting on the corner for the lights to change got into a conversation.

"See that man over there. I owe my fortune to him," remarked one of them.

"Who is he?" asked the other.

"He is the pie maker who supplies 95 per cent of the restaurants in town."

"Huh! And who are you?"

"I am the millionaire dyspepsia tablet manufacturer."

A Personal Matter

Mrs. Parks was down in the seventies, and admitted it but declined to be classed as elderly, was buying host at the local store. The young woman clerk, desiring to be helpful, spread out the contents of a box saying, innocently:

"We're selling a lot of these to old ladies."

Mrs. Parks smiled. "But I want them for myself," she said, gently.

Solving the Problem

They were both in evening dress, when they collided with each other.

"Good heavens—you!" gasped one. "Gladys is giving a party," replied the other, shifting a large bottle of furniture polish from one hand to the other.

"Oh! What's the furniture polish for, then?"

"Well, you see," replied his friend, "she insisted on my bringing something for use on the table."

The Born Moocher

Householder—Ah! I've sold that roller and those garden tools you've come to borrow and have gone in for chickens—

Champ Borrower—Oh—er—that reminds me—we've visitors to tea and I wonder—er—could you lend me a few eggs?

Politics Everywhere

"I have been much impressed," remarked Senator Sorghum, "by reading Milton."

"Paradise Lost?"

"Yes. It looks to me as if even when you get to heaven you are liable to encounter ancient traces of some rather ugly politics."

Advancing Refinement

"Guess we'll have to change the name of Crimmon Gulch," remarked Cactus Joe, as he pinned a carnation on the lapel of his dinner coat.

"What'll we call it?"

"We ought to sacrifice the old name entirely. We might rename it 'Pink Rivulet.'"

Behind the Times

Mrs. Fowler—I don't see any modern improvement in that strain of hens.

The Breeder—Why, madam! They are daily layers, non-sitters—

Mrs. Fowler—I know all that, but when they lay they don't cackle a bit louder than hens did when eggs sold for fifteen cents a dozen.

Bonds of Matrimony

First Club Member—If I could get a wife like he's got, I would marry myself.

Second Club Member—Then some women have good points?

First Club Member—Yes; she lets him buy his own cigars and neckties.

Poets paint with words and painters speak with pencils.

BRITISH COLUMBIA

The Mineral Province of Canada

TO THE END OF DECEMBER, 1927.

Has produced Minerals as follows: Placer Gold, \$78,174,795; Lode Gold, \$130,651,919; Silver, \$86,889,046; Lead, \$121,850,734; Copper, \$221,492,079; Zinc, \$59,508,692; Coal, \$271,294,668; Structural Materials and Miscellaneous Minerals, \$53,502,295; making its mineral production to the end of 1927 show an

Production for Year Ending December, 1927,
 \$60,729,358

The Mining Laws of this Province are more liberal and the fees lower than those of any other Province in the Dominion, or any Colony in the British Empire.

Mineral locations are granted to discoverers for nominal fees. Absolute Titles are obtained by developing such properties, the security of which is guaranteed by Crown grants.

Full information, together with Mining Reports and Maps, may be obtained gratis by addressing:

THE HON. THE MINISTER OF MINES,
 Victoria, British Columbia

N. B.—Practically all British Columbia Mineral Properties upon which development work has been done are described in some one of the Annual Reports of the Minister of Mines. Those considering mining investments should refer to such reports. They are available without charge on application to the Department of Mines, Victoria, B. C. Reports of the Geological Survey of Canada, Winch Building, Vancouver, are recommended as valuable sources of information. Reports covering each of the Six Mineral Survey Districts are published separately, and are available on application.

CITY REAL ESTATE FOR SALE

Applications for immediate purchase of Lots and Acreage owned by the City, within the Municipality, are invited.

Prices—From \$25.00 per lot upwards.

Terms—Cash and approved payments.

List of Lots and prices may be seen at the City Office.

JOHN A. HUTTON.

City Clerk.

Poisoned! But the Child's Life Was Saved by the Telephone

The youngster, making its way about the house, had come upon a strange and attractive bottle. Unseen by its mother, it removed the stopper and drank a portion of the contents. POISON! In a moment the mother had found the child. Quick! To the telephone!

The cry for help spread over the wires to a doctor. He hurried to the scene, administered quick relief, and the infant was saved.

Once more the telephone had proved its value as a friend in times of emergency.

B. C. TELEPHONE CO

THE SUN prints all the local news and carries a number of interesting features found in no other Boundary paper \$1.00 per year

Circle the Globe

1. The Fairchild cabin monoplane "City of New York" with her wings folded at Curtis Field, N.Y., prior to being loaded on a transatlantic liner. 2. John N. Mears and Capt. C. B. Collyer, his pilot, with the dog mascot that accompanied them in this record dash around the world. 3. The Empress of Russia which carried Mears and Collyer across the Pacific with their plane "The City of New York" aboard. She was used by Mears in 1913 when he made his first world record.

Twice now, John Henry Mears has circled the world in record time. On each occasion the Canadian Pacific liner "Empress of Russia" has enabled him to beat all former records. Twenty-three days before his plane "The City of New York" landed at Curtis field, L.I., Mears and his pilot, B. D. Collyer, flew 700 miles out to sea and landed aboard the ship that conveyed him to France. Arrived in Europe, he flew from Cherbourg to Yokohama and boarded the "Empress of Russia" at Kobe, where the white liner waited ready to dash across the Pacific

to Vancouver. From Vancouver to New York was covered by Mears' monoplane, which he carried with him on board. In his first article Mears prophesied success for himself and his companion because "the Canadian Pacific liner 'Empress of Russia' brought me luck when I broke the record in 1913 and I look on it as a good omen that she is to help me break the record again."

He succeeded in breaking the record even better than expected, the "Empress of Russia" bringing him in a day ahead of schedule, enabling him to hop across the

continent in his plane and arrive at Battery Park, New York, 23 days, 15 hours, 21 minutes, and 3 seconds after he had left on his journey eastward. He sent the following telegram to Mr. H. B. Beaumont, of the Canadian Pacific Steamships at Montreal:—"Collyer and I want to express our deep appreciation for the splendid cooperation we have received on our trip across the Pacific on the 'Empress of Russia.' Getting the ship in to Victoria Friday evening ahead of schedule saved us a day and we are deeply grateful."

LOWER MAINLAND

Vancouver to New Westminster, 14th street hill into New Westminster closed to all traffic due to paving, detours provided. New Westminster to Port Coquitlam, macadam, good. The north side of the Fraser river to Harrison is in fairly good condition although somewhat dry and a bit dusty over the mountain. The Scott road to Ladner is now open and pavement is completed to the Hunt road. The Scott hill is a bit rough. All gravel roads are somewhat rough and dusty owing to the dry hot weather.

VANCOUVER AND VICINITY

Vancouver to Grouse mountain, paved and gravel road in good condition. At the Grouse Mountain Chalet we have an elevation of 3800 feet, 18 miles from the city. Enroute to Grouse mountain it is necessary to motor across the Second Narrows bridge, this being a toll bridge, 15c per car and driver and 5c per passenger. Second Narrows bridge to Capilano Canyon road to Whytecliffe and Horseshoe Bay, macadam road to West Bay, thence gravel road to Whytecliffe Park, which is in fair condition with a good paved road to Horseshoe Bay. Hastings-Barnet road closed for a short period beyond Sperling avenue, due to paving. Open from 6 p.m. to 7 a.m. Douglas road closed from Grandview Highway to Edmonds due to paving. Driveways around Marine Drive and Stanley Park, good. River road to New Westminster, some construction work is being done, detour provided.

VANCOUVER ISLAND

Island Highway from Victoria to Nanaimo, good macadam. Summit road from Malahat road to Old Trunk road Shawanigan lake, fair. Old Trunk road from Summit road to Cobble Hill, fair. Sooke road from Colwood to West Sooke, good. Colwood to West Sooke, good. Colwood to Metchoin, good. West Sooke to Jordan River, fair. Metchoin to East Sooke, good to Rocky Point road, thence fair to East Sooke. Langford to Mill Stream P. O., fair. Victoria to Sydney, good. Sydney to Brentwood, good. Brentwood to Victoria, good. All gravel roads are more or less rough due to the recent dry weather and heavy traffic. Nanaimo to Qualicum Beach, good macadam. Parksville to Port Alberni, gravel in fair condition although very dry and a bit rough over the mountain to Alberni. Alberni to Port Alberni, paved. Qualicum Beach to Union Bay, good gravel. Union Bay to Cumberland, Courtenay and Comox, good, paved. Courtenay to Oyster River Bridge, good macadam and gravel, thence to Campbell River and Forbes' Landing, gravel road in fair condition.

CARIBOO HIGHWAY

Hope to Lillooet: This road is in fairly good condition although work is being done on the Cisco Hill division. However, this does not interfere with tourist traffic. Lillooet to Pavilion and Kamloops via the Marble Canyon, in fair condition. Cache Creek to Clinton and 150-Mile House, good at present, although all motorists should be advised to carry chains with them in case of a heavy rainfall.

CONDITION OF B.C. HIGHWAYS

OFFICIAL BULLETIN SUPPLIED BY THE BRITISH COLUMBIA AUTOMOBILE CLUB

YALE ROAD

Fry's Corner to Langley Prairie closed for construction work. Detour via Cloverdale to Langley Prairie. Langley Prairie to Murrayville, paved. Murrayville to Abbotsford, considerable work has been done on this road but owing to recent heavy traffic and hot dry weather it is still somewhat rough. Abbotsford to Chilliwack via the Sumas Flats, this section is also rough but the grader is now working on the road. It is necessary to detour to Chilliwack via Sardis.

KAMLOOPS DISTRICT

Ashcroft to Kamloops, fair. Merritt to Kamloops, good. Vernon-Kamloops via Falkland fair. Kamloops to Paul Lake, good. Kamloops to Salmon Arm, fair.

REVELSTOKE DISTRICT

Salmon Arm to Revelstoke, good. Revelstoke to Arrowhead, good. Revelstoke to Big Bend, 30 miles, good. Revelstoke to top of Mt. Revelstoke, good. Ship cars from Revelstoke to Golden daily, train leaves Revelstoke at 4:30 a.m. (freight), but if car is loaded any freight car passing through will take your car. Passenger train leaves Revelstoke at 1:10 a.m. and 12:35 noon, fare being \$30 for the car and \$3.70 each passenger. Note: The \$30 includes \$2 for loading of car at Revelstoke and \$1 for unloading at Golden.

VERNON DISTRICT

Salmon Arm to Enderby, good. Enderby to Vernon, good. Vernon to Lumby, good. Lumby to Edgewood: This road is quite narrow in places and is now a bit rough owing to the hot dry weather. Vernon to Kelowna, good.

OKANAGAN DISTRICT

Kelowna to Peachland, good. Peachland to Summerland and Penticton, good. Penticton to Osoyoos, fair.

BORDER ROADS

The roads over the Cascade mountains are in fairly good condition, although dry and dusty. Trail to Nelson, good. Nelson to Kuskonook: One must ferry across the Kootenay lake between these points at a cost of \$2.25 a passenger and cars according to the wheelbase, from \$5 to \$7.50. Time, 4 hours.

CROWS NEST PASS AND FERNIE DISTRICT

Kingsgate to Yahk, fair. Kuskonook to Yahk, fair. Yahk to Moyle, fair. Moyle to Cranbrook, fair. Cranbrook to Kimberley, good. Cranbrook to Fort Steele, fair. Cranbrook to Wardner, fair. Wasa to Skookumchuck, fair. Wardner to Elkton, good. Crows Nest Pass, fair. Crows Nest to McLeod, fair.

MARKETING ACT TO BE ENFORCED

VICTORIA, September 4.—The produce marketing act is one of the statutes of British Columbia. So long as it is such it will be enforced to the limit of our ability," Attorney-General Pooley declared last Saturday in explaining the action of provincial police in halting the shipment of fruit by interior Doukhobors who hold no shippers' licenses from the interior committee of direction.

Police Ordered to Halt Shipments

Mr. Pooley said he had instructed police to halt fruit shipments not covered by license after he had been warned of this movement by F. M. Black, chairman of the direction committee. The regulations of the committee under the marketing act will be enforced like any other statute, Mr. Pooley added.

Premier Probing Fruit Dumping

Meanwhile Premier Tolmie is continuing his investigation into the fruit marketing situation which threatens serious losses to the fruit growers of the province. Before taking any action on this problem and on the reported dumping of American fruit in prairie markets, the premier wants to know all the facts accurately. He is collecting data from government officials and the fruit industry now.

NURSES know, and doctors have declared there's nothing quite like Aspirin to relieve all sorts of aches and pains, but be sure it is Aspirin the name Bayer should be on the package, and on every tablet. Bayer is genuine, and the word genuine—in red—is on every box. You can't go wrong if you will just look at the box:

Aspirin is the trade mark (registered in Canada) indicating Bayer Manufacture. While it is well known that Aspirin means Bayer manufacture, to assure the public against imitations, the Tablets will be stamped with their "Bayer Cross" trade mark.

WOMEN DRIVERS ARE NOT RECKLESS

By Erwin Greer

PARIS is alarmed by the increasing number of women driving automobiles, and there is a growing agitation in favor of revoking women's motor licenses.

There are 6000 women possessing permits to drive cars in Paris, whereas some three years ago there were only 600 feminine motorists. The French men claim that the increase in accidents is due to the French women's habit of "running wild."

The truth, however, is that the French men are responsible for the accidents arising from women drivers. Instead of looking where they are going, the pedestrians prefer to watch the women at the wheel. The Parisian cannot get accustomed to the idea of the Parisienne driving a car.

A woman driver has just been fined in a Paris court \$600 for an accident caused to another woman. The feminine motorist was driving her car in the Boulevard Saint-Michel when another woman crossed the road in front of her. Instead of putting on the brakes or turning the wheel the woman driver simply swung up her hands in despair, and the unfortunate pedestrian was so seriously injured that she is only just able to walk. The accident took place two years ago, but French courts seldom hurry their decisions.

Women drivers as a class are careful and law-abiding. I think it must be conceded that the accident statistics indicate that women generally are more careful and law-abiding than men.

The beauty whose high-powered sport model breaks all the city speed laws as well as the bones of unwary pedestrians and whose devastating charm disarms the motorcycle cop and even the stern judge is rarely met with, except on the screen. Police departments, chambers of commerce and automobile clubs seem to agree that the hand that rocks the cradle is quite competent at steering wheel. One thing is certain, the number of men involved in motor accidents greatly exceeds the number of women.

No Parking

When Noah sailed the waters blue, He had his troubles same as you; For forty days he drove the ark, Before he found a place to park.

Overheated

First Taxi Driver—I hear Shorty Marusco is in the hospital wit' a nervous breakdown.

Second Bandit—Yeah, th' poor sap took his wife out in his bus and let her drive.

Sincerity recognizes sincerity.

See the New UTILITY TRUCK

Built to Win Favor on Western Farms

EQUIPPED with the special grain body illustrated, the New Chevrolet Utility Truck is the ideal haulage unit for the Western Canada farmer.

It handles full loads with the greatest ease . . . enables you to cut down the time and expense of hauling . . . and offers dependable performance, even in heavy mud and sand. Practically every part of its chassis is oversize.

Come in and see the new Chevrolet Utility Truck! You will find that it affords everything you could possibly want in a haulage unit of this capacity—unusual pulling power—remarkable performance—amazing handling ease—and outstanding economy of ownership and operation.

Let us give you figures on its low maintenance costs.

or cloudburst, as these roads then become somewhat slippery. 150-Mile House to Quesnel and Hazelton, fair.

Loaded With Powder

He—How can that woman shoot off her face so much? She—It's always loaded with powder.

Determined

Patient—Will I get well? Doctor—Yes, sir. You'll get well if it costs you \$50,000.

Alfred and Eloise "Hey, Eloise," yelled Alfred, "take that dog off the links." "What for?" "He thinks it's up to him to retrieve all golf balls."

Modern Instance She (at the art museum)—Those old warriors must have looked grotesque in their elaborate armor. Her Friend—Yes; almost as grotesque.

Flattery that is rewarded is inextinguishable.

Largest Passenger Engine in British Empire

When the largest passenger locomotive in the British Empire emerged from Angus Shops under her own steam, close to eight thousand employees, most of whom had contributed something to her creation, stopped to cheer as, her throttle gently opened for the first time, she moved slowly forward. She is a triumph of Canadian design and engineering craftsmanship; a graceful mechanism nearly one hundred feet long, with a tractive effort of 60,800 pounds, equal to 3,685 horse power.

The new K-1-A" Class locomotive has been built from designs originated in the motive power department of the Canadian Pacific Railway in the company's own shops by its own employees. Two of these engines have been constructed and they will first be operated on the Montreal-Toronto run.

Although its weight, 424,000 pounds, is greater than that of any other passenger engine in Canada, the extensive use of Canadian nickel steel parts has reduced it to a minimum, and the high ratio of tractive power to weight is a notable feature of the new engine. Other features are a one-piece cast steel locomotive bed; a tender with a water bottom underframe; boiler pressure of 275 pounds, the highest of any locomotive in Canada; and a length of engine and tender of 97 feet 5 inches. There are eight pairs of wheels, a four-wheel leading truck, eight drivers, and a four-wheel trailing truck. The wheels have a diameter of 75 inches and the cast nickel steel cylinders are 25½ inches by 30 inches. The coal capacity is 18½ tons, and water capacity 12,000 gallons. A mechanical stoker considerably lightens the duties of the fireman.

The new design aimed at largely increased power, reduction of weight and elimination of parts. The result has shown that Canadian technical skill and workmanship is equal to the task of putting a fully equipped engine of the best type under its own power, and that the Canadian Pacific Angus shops, the second largest on the continent, are capable of vying successfully with recognized engine building plants anywhere in the world.

THE CITY

Okanagan lake has had its Ogoogo for years. Now a hippopotamus has been seen in a lake in the Cariboo district. With all the liquor being consumed at Christina lake, it seems passing strange that no one has yet been able to discover a major attraction at that popular seaside resort.

Jack Skilling, late of Eholt, has purchased from the city the Walker residence at the intersection of Main and Bridge streets, the deal being negotiated by Geo. C. Egg. Mr. and Mrs. Skilling took possession of their property this week and their children are now attending the public school.

Labor day passed away last Monday without any special excitement in local circles. A large number of the residents of the city interpreted the word "Labor" in a literal sense, and put in an honest day's work.

Reuben Hughes, who recently sold his fruit ranch to Mr. Lawrence, has moved into the city with his family. They have taken up their residence in the house near Ed Graham's on upper Main street.

Mrs. T. T. Walker and son Tommy and her mother, Mrs. Hoffman, left on Wednesday for a motor car trip through the Okanagan country. They were accompanied by Mrs. Ross McLeod.

Joseph Willis, local C.P.R. agent, was confined to his bed yesterday with a severe attack of pleurisy. Mr. Harper is relieving him at the downtown station.

O. G. Dunn is spending a month's or six weeks' vacation at his father's home in Toronto. He went east by the Great Northern and will return home by the Canadian Pacific.

Miss Gladys Armson, professional nurse, returned to Vancouver on Wednesday, after visiting her mother and brothers in this city for a few weeks.

Mr. and Mrs. A. D. Morrison and son Arthur returned on Sunday from a motor car trip to Davenport, Wash., where they visited relatives.

A carload of lumber arrived in the city last Saturday for at cookhouse at the Union mine. It is now being transported to Franklin camp.

The public and highschools opened throughout the province last Tuesday morning. There is a normal attendance in the local schools.

Miss Dorothy McLaughlan left for Vancouver last Sunday to complete her training as a professional nurse.

George Mattocks came down from the Union mine this week and has been spending a few days in the city.

Principal Hines, of the public school, arrived in the city from the coast the latter part of last week.

Elton Woodland left for Vancouver today to resume his studies at the University of British Columbia.

Captain Frakes is taking care of the court house while Mr. Wilkinson is taking his vacation.

Gordon Massie left on Wednesday for Esquimalt to sign up with the Canadian navy.

P. C. Black, local horticulturist, has returned from a trip to California.

Mrs. A. Benson has returned home from a visit to Nelson.

N. L. McInnes is reported to be quite ill at Trail.

Miss Lillian Hull will leave tomorrow for Montreal.

EGOTISM -HAT MIGHT

BE TERMED SUBLIME
Standing passively by the dancing floor he glanced languidly over the young females that ogled him as they passed. Carelessly he brushed the suspicion of a stray hair back into place. There was Loretta—a giddy thing in April blue—and, as usual, trying to make him. He met her glance coldly and pulled softly at his tie—it would bring the red out a little more in the knot.

Julie—a creamy bit of inanity—a stinging reply finished her meaningless babble. He wondered a little, though, if he had blended the face powder properly. Nanette—a drab splurge of colors—was simply not noticed. He pulled the handkerchief out a little from his pocket.

Oh, well, he was tired of being admired, and it was boring to be constantly avoiding their praise. He strolled into the smoking room, pulled out his silver cigarette case—gold

was so gaudy—tamped a long, thin cigarette reflectively, lit it and walked over to the mirror. He studied himself a moment. His features stiffened, he bit his lip.

Finally, his eyes blazing, he hurled his cigarette case at the glass.

"Liar," he muttered and turned and walked out of the room.

High Prices Are Often Imaginary

(By Betty Barclay)

THE average woman fails to appreciate that many foods look expensive, are really reasonable in price and sometimes actually cheap.

Price is only relative, and we should remember this when we are marketing. If we don't, we are likely to fly off on a tangent and come home without some of the things that we need, bringing in their place certain foods that we are at present eating too freely.

Let us take oranges and the present time to prove our point. This fruit is selling today at a price that many women look upon as rather high. Probably here and there a woman is buying in smaller quantities or not at all, waiting for the price to come down to last year's level. Is she acting wisely or even intelligently when she takes this stand?

Five cents for an orange may appear high to the woman who purchased oranges last year for thirty or forty cents a dozen. But how about figuring upon size before deciding that the price is too high. We do not hesitate to pay five cents for a very small portion of butter, beefsteak or walnut meat—and we do so accustomed to paying from sixty cents to a dollar a pound for such foods that we hardly think of the price. Place an orange beside five cents worth of porterhouse steak, or five cents' worth of many of our other staples, and we will see how even at sixty cents a dozen, oranges are not particularly high.

Or figure this so-called high price of ours by the pound. Oranges selling at sixty cents a dozen, probably about three to the pound—bringing our price per pound down to fifteen cents.

This is interesting, isn't it? Here we have paid sixty a pound for butter when it was not particularly plentiful, every year since we first started to market—and we rarely complained. We pay forty, fifty, sixty or even seventy cents for meat—and still we keep comparatively quiet. But when we are paying fifteen cents a pound for oranges we begin to shout "expensive."

Price is merely relative. Instead of paying a high price for oranges today, we are really paying a price that is a little higher than a very cheap price paid when the crop was much heavier and the demand not so great.

No! There is no argument by bringing up the fact that sixty-cent meat is natural because it comes from the middle west and it takes a steer a long time to come from califdrom to beefdom. Your breakfast orange probably comes from California, from a tree that had been growing for years before the steer's mother was born.

We merely get into a rut by comparing prices when they are high with prices when they are low, and not realizing that climate, crop, rainfall, packing, selection of quality fruit, and a dozen and one other things enter into the high price that may prevail at a certain time.

To a great extent we should forget price and think more about health. The minute we do this we will be able to save enough on foods that we are now eating too heavily, to purchase all we need of the foods that we should eat more than we now do.

Most of us eat too heavily of carbohydrate and protein foods that have an acid reaction in the stomach, and not heavily enough of fresh fruits and green vegetables—particularly the leaf vegetables. See to it therefore that expensive carbohydrates and proteins are purchased in less quantity—and with the money saved you can purchase more liberally of the desirable balancing foods, even though they may be selling at a little higher figure than they were a month or a year ago.

See to it that you eat heavily of green vegetables and fresh fruits of all kinds. Drink milk if you like it. Drink lemonade when thirsty and help to reduce the acidity of your body—for straine as it may seem, lemons like oranges have a decided alkaline effect when taken into the system. Drink plenty of pure cold water. Eat salads, fruit cups, light desserts. Sleep. Exercise.

Do these things and you need not

worry about the high price of some special fruit or vegetable. You will save enough on other things to continue your use of the food that improves your health. If you don't, you will surely save more than enough by the elimination of doctor's bills.

Food is expensive when you do not get enough of it, or when you eat it too heavily. Don't worry overmuch about the price you pay. One food, low in price, may be very expensive if it causes internal trouble. Expensive oranges are cheap if they counteract the acidity of the body and bring relief. Price is only relative and women should remember this when they shop.

HEALTH SERVICE

OF THE CANADIAN MEDICAL ASSOCIATION

DOES YOUR CHILD SEE?

WHEN a child is blind in both eyes, the condition, of course, is recognized. There are many children who have defective eyes, which fact is unknown to their parents. That this, is evidenced every year by the number of children entering school, who are found by school physicians to have defective eyes.

The good work of the school health services does not provide for the preschool child, or for the child who attends a school where there is no school physician or nurse.

A child should be able to recognize a picture or an object one-half an inch square at twenty feet. Each eye is tested separately, one eye being covered with a card during the test of the other. For near vision, a picture book may be used. If there is any appreciable defect in either eye, for near or distant vision, the family physician should be consulted.

Cross-eye is a condition which is frequently neglected because of ignorance as to its significance by parents. Children with this condition should be placed under medical care without delay. A cross-eyed child sees double. This causes confusion and so the mind trains itself to pay attention only to the image that comes to it through the straight eye. This results in one eye's being developed through use and the other becoming useless because it is not used.

Unless the condition is properly treated early, the child uses the use of one eye and is actually blind in that eye. If the child is treated between two and three years of age, he most, or all of his vision can be saved; the longer treatment is delayed, the more vision is lost. Cross-eye is a condition that does not correct itself. Children do not grow out of it.

If the child is placed sitting, facing the parent, an arm's length away, with one eye covered by the parent's hand, and is made to look at the parent's nose with the uncovered eye, the parent will find that, on uncovering the other eye, it is either looking at the nose, which means that no cross-eye is present, or that it moved out, or remained crossed in or out, which is an evidence that cross-eye is present.

Your children will appreciate, in later years, your care of this special organ.

Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.

The Explanation

"You have a cupful of hot water every day?"

"Yes, my landlady calls it soup."

Correct

Smith—What musical instruments do burglars like best—the lyre?

Ethel—No—the loot.

Surprise

Little Lucy—Mamma, I have a surprise for you.

Mother—Yes, darling, what is it?

Little Lucy—I've just swallowed a nail.

His Final Mistake

"You've been a most faithful husband, John. I believe that not once since you married me have you done a wrong thing."

"No, my dear, that was the last."

pathy and protection. It is too bad he cannot be tamed—and measured—and taught to sit up and beg of the tourists for peanuts.—Western Tribune.

tespue as a chap in a baseball catcher's outfit, or a football suit.

The bearing and the training of a child is woman's wisdom.—Tennyson

General News

Tourist traffic to Saint John this season is the largest in its history, and so far is equal if not greater than during the whole of last season. Tourists started arriving earlier this spring, and have continued in much larger numbers than in other seasons.

Colonel Scott, who is successfully producing tulip bulbs at Salmon Arm, British Columbia, believes that the industry has a future. He has one acre under this production with drying, cleaning and storage sheds. He grows fifty-two varieties of bulbs and has about a quarter of a million bulbs on hand growing.

The Alberta Amateur Championships will take place shortly at Banff, Alberta, where the annual Highland Gathering and Scottish Musical Festival is being held from August 31 to September 3. An elaborate programme has been arranged of a Scottish character, many of the athletic contests being peculiar to that race, such as tossing the caber and putting the shot.

Plans are reported to be on foot among sheep raisers to establish in Vancouver a wool grading centre similar to that functioning in Trenton, Ontario, where at present most of the wool business of Canada is conducted. An authority states this would probably have the result of increasing the returns to the producer from 25 to 50 per cent.

Although the automobile is sometimes said to be a rival to the railroad, it gives the latter a great deal of traffic. The number of freight cars used by the Canadian Pacific Railway for the transport of automobiles has doubled during the past five years, and the latest order of 300 new cars for the company has just been completely filled.

Trans-Atlantic records have been made by two new vessels, the "Duchess of Bedford" and the "Duchess of Atholl," the first two of the new cabin class quartette to be built by the Canadian Pacific Steamships. The former has just accomplished an eastbound voyage from Liverpool to Montreal in six days, fourteen and a half hours, while her sister ship, enroute at the same time, made a westbound crossing from Montreal to Liverpool in six days, 13 hours.

The second school car operated jointly by the Canadian Pacific Railway and the Ontario Department of Education has been issued from the Angus Shops, Montreal, for service in the district west of Fort William. The car is a remodelled first class coach equipped like an up-to-date "little red school house" with bright classroom, with blackboard, globe, school books, regulation desks, and so forth; a library for the use of students and adult visitors as well; and comfortable living quarters for the teacher. The school car is able to reach remote areas where permanent school facilities are not available.

SYNOPSIS OF LAND ACT AMENDMENTS

PRE-EMPTIONS

Vacant unreserved, surveyed Crown lands may be pre-empted by British subjects over 18 years of age, and by aliens on declaring intention to become British subjects, conditional upon residence, occupation and intent for agricultural purposes.

Full information concerning regulations regarding pre-emption is given in Bulletin No. 1 Land Series, "How to Pre-empt Land," copies of which can be obtained free of charge by addressing the Department of Lands, Victoria, B. C., or any Government Agent.

Records will be made covering only land suitable for agricultural purposes, and which is not timberland, i.e., carrying over 5,000 board feet per acre west of the Coast Range, and 8,000 feet per acre east of that range.

Applications for pre-emption are to be addressed to the Land Commissioner of the Land Recording Division, in which the land applied for is situated, and are made on printed forms, copies of which can be obtained from the Land Commissioner.

Pre-emption must be occupied for five years and improvements made to the value of \$100 per acre, including clearing and cultivating at least five acres, before a Crown Grant can be received.

For more detailed information see the Bulletin "How to Pre-empt Land"

PURCHASE

Applications are received for purchase of vacant and unreserved Crown Lands, not being timberland, for agricultural purposes; minimum price of first-class (arable) land is \$5 per acre, and second-class (grazing) land \$2.50 per acre. Further information regarding purchase or lease of Crown land is given in Bulletin No. 10, Land Series, "Purchase and Lease of Crown Lands."

Mill, factory, or industrial sites on timber land, not exceeding 40 acres, may be purchased or leased, on conditions including payment of stumpage.

HOMESITE LEASES

Unsurveyed areas, not exceeding 20 acres, may be leased as homesites, conditional upon a dwelling being erected in the first year, title being obtainable after residence and improvement conditions are fulfilled and land has been surveyed.

LEASES

For grazing and industrial purposes areas not exceeding 640 acres may be leased by one person or a company.

GRAZING

Under the Grazing Act the Province is divided into grazing districts and the range administered under a Grazing Commissioner. Annual grazing permits are issued based on numbers ranged, priority being given to established owners. Stock owners may form associations for range management. Free, or partially free, permits are available for settlers, campers and travellers up to ten head.
